

Fishing for Facts:

The effects of reef zoning on inshore fish

Scientists have been studying Great Barrier Reef zones for over 10 years. Hear from a researcher who spends several months each year at sea finding out:

- *What's happening to fish numbers?*
 - *How are the zones different?*
 - *Will trout numbers continue to grow?*
 - *Will they overflow into other zones?*
 - *What questions remain unanswered?*
-

JCU RESEARCHER
Dr David Williamson is an avid recreational fisher and keen to share his findings with the Mossman community.

When 7-8 pm, Thursday 10 June 2010

Where Mossman Bowls Club
Johnston Road, Mossman
