

REEF TOURISM
QUARTERLY REPORT # 6
Quarter 2, Year 2 | Cairns & Port Douglas
April 2008 – June 2008

This quarterly report forms part of a series on reef tourism in the Great Barrier Reef (GBR) produced by James Cook University (JCU) and funded by the Australian Government's Marine and Tropical Sciences Research Facility (MTSRF), which is administered in North Queensland by the Reef and Rainforest Research Centre. The aims and methodology of this research are presented in the introduction below. The data presented in this report summarise the results obtained during the second quarter of the project's second year (N = 357); the results from the same quarter in the first year of data collection (N = 422); and the overall results for the period between November 2006 and June 2008 (N = 2657). The results include socio-demographic characteristics, travel behaviour, alternative destinations, motivations and planning, and reef experience.

Note: For purposes of comparison, the figures for the entire sample & the same quarter from Year 1 are provided in the text in brackets after the figures for this quarter (Year 2, Quarter 2).

1. INTRODUCTION

The research described here falls under the MTSRF research program to identify **sustainable use and management of marine resources of the Great Barrier Reef** and specifically the **analysis of tourism use and impact on the Great Barrier Reef for managing sustainable tourism**. This program will identify annual visitor usage patterns of the GBR to enable the identification of key trends and drivers of visitor patterns. Results are presented quarterly.

2. METHODOLOGY

The principle methodology for this research is visitor surveys distributed through participating operators. Crew from these marine tourism operators distribute and collect the surveys at four locations across

the Great Barrier Reef (Port Douglas/Cairns, Townsville, the Whitsundays, and the Capricorn Coast). Results are available in an aggregate form as well as regionally, such as the report presented here. Currently, ten operators are involved in this research. A total of 357 surveys were collected in the second quarter of Year 2.

Data are collected on reef visitors' socio-demographic characteristics, and travel patterns, motivations, activities, alternative destinations considered and levels of satisfaction (including expectations and best and worst experiences).

3. LIMITATIONS

Data from the Asian market have yet to be collected. Sampling bias by crews must also be considered.

4. FINDINGS

Origin of Respondents

This quarter's sample consisted of slightly fewer men, 41.6% (48.8%;¹ 46.9%;²) and more women, 58.4% (51.2%; 53.1%). A third of the respondents, 30.7% (34.0%; 29.7%), were from Australia, of which 26.7% were from Queensland (Figure 1).
